ConstructTrack — Third Defense Checklist

Minor Project (ES-451) · Team 54 · Guide: Dr. Seema Kalonia

Based on the department notice for the 7th Semester Minor Project Third Defense

1. Required by the notice

#	Notice requirement	What to bring	Status
1	Formal dress	All three team members in formal dress	On the day
2	Hard copy of the progress report	1_ConstructTrack_Progress_Report.pdf — printed (15 pages), proforma signed by mentor	Ready to print
3	Hard copy of research paper draft + target conference/journal	2_ConstructTrack_Research_Paper_IEEE.pdf — printed (4 pages). Target venue is in Section 8 of the report: IEEE-IC4 2027 (Medicaps University, Indore); alternative: ITcon journal	Ready to print
4	Present the running project	Live site https://construct-track-pi.vercel.app on a laptop with charger + phone hotspot	Live

Warning from the notice: absence = zero marks; no rescheduling; appearing without the required documents bars you from the External Viva.

2. Recommended extras

Item	File / link	Why
Revised synopsis	3_ConstructTrack_Synopsis_Revised.pdf (+ original 1 Sep synopsis)	Shows planned scope vs. delivered system
Viva preparation guide	4_ConstructTrack_Viva_Prep.pdf — for the team, not for submission	52 questions with model answers
GitHub repository	https://github.com/yash06rajput/ConstructTrack	Code, README with screenshots, docs
Extra copies	One extra set of report + paper	Panels often keep one

3. Before the defense

- ☐ Print the progress report and the research paper (and synopsis if carrying).
- ☐ Get the mentor's signature in the proforma for Weeks 1–7.
- ☐ Fill Dr. Seema Kalonia's email in the paper (Word file) or leave it blank.
- ☐ Agree which member explains which module; keep it consistent with the proforma.
- ☐ Run the AI service locally and analyse 2–3 site photos so AI results appear on the live site (README → Deployment, docs/DEPLOYMENT.md section 2).
- ☐ Open the live site once before presenting; keep the GitHub repo and paper PDF open in tabs.
- ☐ Rehearse the 3-minute demo script (Viva Prep, Section 7).

4. Demo order (3 minutes)

Dashboard → Commercial Office Building (progress chart) → Delay Prediction (72/100 HIGH, 70-day delay, factor explanations) → Metro Station Annex (91/100 CRITICAL) → construction images and AI analysis → generate report → PDF.

5. Key facts to say

- Live web app on Vercel + Supabase; YOLO11 service containerised with Docker and self-hosted (free Docker hosting on Hugging Face became paid in 2026); results stored centrally, so they are always visible online.
- Risk score = 0.30 variance + 0.30 velocity + 0.25 predicted delay + 0.15 trend; bands 25 / 50 / 75.
- YOLO11 output is visual evidence only — never an input to progress or risk numbers.
- 61 web tests + 32 AI-service tests; evaluation reproducible with npm run evaluate.
